

Accessing Skill Syllabus

Created and Delivered, How to Access a Skill Syllabus

You understand how and why Skill Syllabus works ([introduction to concept](#)) and how to get the Skill Syllabus to your students ([the process](#)).

Good students access a syllabus frequently in a semester. Traditionally it acts as a guide to perform well in a course. A Skill Syllabus is also responsive, so changes occur during the course (requiring students constant attention).

A professor might modify the syllabus due to changing requirements or reacting to students' performance in the course.

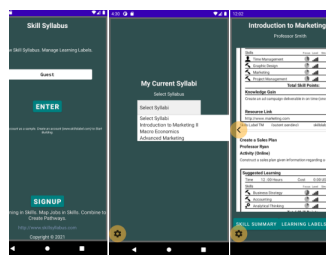

Skill Syllabus is accessible in Google Android and Windows 10 apps and a substantial web application. It renders in the native apps, as an interactive web page, and a PDF.

Managing a Skill Syllabus During a Semester

Current Apps Supported in Google Android and Windows 10.

Like any syllabus, with a Skill Syllabus, you set your expectations, policies, and philosophy. You also detail learning expectations on a task level and summarize them in actionable skill achievements.

So during the first course, you share a printed or emailed PDF and/or access a unique webpage for the syllabus and then go step by step through each of the sections.

Students access the same syllabus in a Google Android app or an interactive website. The actual tasks on the syllabus (represented as learning labels) are accessible in other apps with more functionality to manage them.

During the course, you might use Learning Labels Dashboard or Learning Labels Paged application to quickly add or remove tasks in the syllabus. There is functionality to also assign tasks to your students directly or put them into series.
